

## XLR-F Connector | MONTARBO | Technical Specifications (Preliminary)

### DESCRIPTION

The new Montarbo connector is totally made in Italy. With a simple and essential design it represents the perfect combination of convenience and technology, starting from the contacts made in sheared brass, superficially treated with galvanic silver finish in order to ensure excellent weldability and electrical conductivity. The body of the connector that houses the contacts is made by injection molding in Pocan®, loaded with 20% glass fiber. The shell is made of thick turned brass with non-slip nickel finish, making the connector sturdy and essential. The mechanical cable retention system is simple and effective and guarantees perfect mechanical coupling. A practical pressure release button facilitates connections. The nickel-plated steel spring cable guide can accommodate conductors with a maximum cross-section of 6.9 mm. The Montarbo connector is the best combination of convenience and Vintage sturdiness, and the most modern manufacturing technologies.

### FEATURES

- Processed-brass contacts
- Pocan® contact body
- Machined-brass shell
- Spring cable guide in nickel-plated steel
- Mechanical pressure release
- Heavy duty construction

### APPLICATIONS

- Microphone Cables
- Replacement parts for Microphone Cables

### XLR-F XXX - TECHNICAL SPECIFICATIONS

Contacts:	Sheared brass
Body:	Machined Brass
Gland:	Mechanical
Cable guide:	Nickel-plated steel spring
Connector release:	Mechanical pressure
Dimensions:	
Weight:
